

Temporary Collagen Inserts

ASSESS THE EFFECTIVENESS OF PERMANENT PUNCTAL OCCLUSION

EagleVision dissolvable punctal/canalicular Collagen Inserts can be used as a cost effective way to evaluate the benefits of permanent punctal occlusion. Collagen may be inserted to aid in diagnosis of contact lens intolerance, enhance ocular medications, and increase patient comfort after surgery.

- Easy to insert
- Expands in the punctum after insertion to block tear drainage
- Effective for 3-5 days - dissolves completely in 7-10 days
- Available in 1.6mm "shorts" and 2.0mm lengths; 3 diameters
- Helps retain ocular medications after surgery and foreign body removal
- Instructional video available
